

**The Digestive System**

## Digestive organs and their functions

Mouth/Teeth – teeth cut and chew food into smaller pieces

Oesophagus – a stretchy tube that carries swallowed food to the stomach

Stomach – a bag where food is mixed with acid and broken down more

Small Intestine – takes nutrients from food into the blood

Large Intestine – takes water from food and makes waste

Anus – where waste (faeces) leaves the body

## Types of teeth and their functions

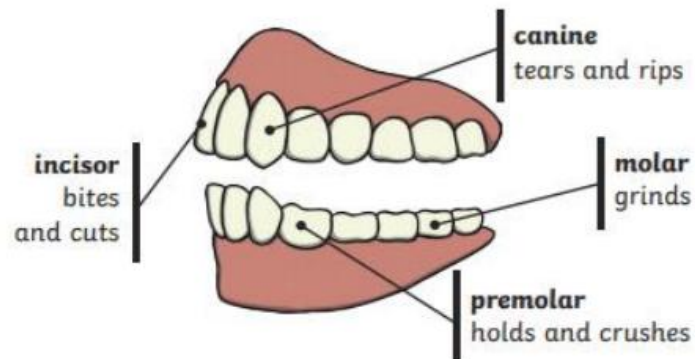

Incisors – sharp and flat, used for cutting food

Canines – pointed, used for tearing food

Premolars – flat, used for crushing food

Molars – large and flat, used for grinding food

## Location of types of teeth in the mouth
