Spotting Edited, Misleading or Bias Photographs

Check the source — Who posted the image and why? Reliable sources explain their purpose.

Look for signs of editing — These include blurry edges, strange shadows, stretched shapes or colours that look unnatural.

Compare with other images — Search for the same event or object on different sites to see if it matches.

Check the context — Captions or cropping can change the meaning of an image.

Spot opinion or bias — Images may be chosen to persuade you; look for one-sided or exaggerated visuals.

Check the date — Old images reused for new events can be misleading.
